

ROHAN M K

Computer Science Engineer/Aspiring Software Developer

Mysore, Karnataka | 9482715920 | rohanmk33@gmail.com | linkedin.com/in/rohan-m-k | github.com/Rohanmk3

PROFILE SUMMARY

Full-stack developer who has independently shipped three production-style projects — from an ML-based network intrusion prevention system to a full-stack event-booking platform — comfortable across React, Node.js/Express, Flask, and MongoDB/MySQL/SQLite. TCS iON-certified Graduate Engineer Trainee (IT), graduating 2026, looking to bring that same build-it-end-to-end approach to an entry-level Software Developer or Full-Stack Engineer role.

TECHNICAL SKILLS

Languages: Python, Java, C, JavaScript

Frontend: HTML, CSS, Bootstrap, React

Backend: Node.js, Express.js, Flask

Databases: MySQL, SQLite, MongoDB

Tools & Platforms: Git, GitHub, VS Code, PyCharm, Linux, Streamlit

Core CS: OOP, SDLC, Data Structures & Algorithms, Networking Fundamentals, Devops, Operating System

Security: Packet analysis (Scapy), ML-based anomaly detection, iptables, threat-intel APIs (WHOIS, VirusTotal)

PROJECTS

CyberShield – AI-Based Smart Network Security System

Python, Scapy, Flask, MongoDB, React, Streamlit

- Eliminated manual intervention from threat response by building an ML-based intrusion prevention pipeline that auto-triggers Linux iptables mitigation rules the moment Scapy's live packet capture flags anomalous traffic.
- Delivered real-time visibility into network health by building a React/Streamlit dashboard that surfaces live packet-capture data and flagged threats to the end user as they occur.
- Applied networking fundamentals and OOP design by architecting packet-capture, ML-detection, and the Flask/MongoDB service layer as independent, modular components rather than a single monolithic script.

HUNT (Secure-Surf) – Website & Chrome Extension

JavaScript, WHOIS API, VirusTotal API

- Standardized website-trust assessment onto a single, repeatable 0–100 “Digital Fence Score” by integrating the WHOIS and VirusTotal threat-intelligence APIs into one scoring engine shared across a web app and companion Chrome extension.
- Extended security coverage from the browser to the API layer by building a Chrome extension that calls the same domain-reputation service as the web app, keeping detection logic centralized instead of duplicated.

Online Event Booking and Management System

HTML, CSS, JavaScript, Bootstrap, Node.js, Express.js, SQLite

- Replaced ad-hoc, spreadsheet-style event coordination with a self-service platform by designing and shipping a full-stack REST application (Node.js/Express + SQLite + Bootstrap) covering browsing, booking, and admin management end-to-end.
- Caught and resolved integration issues between the Express API and SQLite data layer through structured manual testing and iterative debugging ahead of capstone submission.
- Delivered the platform as the capstone project of a 90-hour, TCS iON-certified full-stack development and professional-skills training track; full source published on GitHub for review.
- Repo: github.com/Rohanmk3/ONLINE-EVENT-BOOKING-AND-MANAGEMENT-SYSTEM

PUBLICATIONS

CyberShield: AI Based Smart Network Security System

JETIR · Vol. 13, Issue 5 · May 2026

- Co-authored a peer-reviewed paper on the CyberShield project (see Projects) with faculty and student researchers, Dept. of CSE, P.E.S. College of Engineering, Mandya. Published in the *Journal of Emerging Technologies and Innovative Research (JETIR)* — UGC-approved, ISSN 2349-5162, Impact Factor 7.95.
- Paper ID: JETIR2605348 | jetir.org/view?paper=JETIR2605348

INTERNSHIP / TRAINING

TCS iON GET-IT Internship – Job Achiever, GET-IT Learning Track

2026

P.E.S College of Engineering, Mandya

- Completed a 90-hour, TCS iON-certified industry-readiness track combining full-stack development with workplace and professional-communication skills training.
- Built the Online Event Booking and Management System (see Projects) as the track's capstone, applying an end-to-end software-development-lifecycle process from requirements through delivery.

EDUCATION

P.E.S Collage Of Engineering, Mandya. B.E in Computer Science Engineering — CGPA: 7.38 / 10

2023 – 2026

C.P.C Polytechnic, Mysuru. Diploma in Computer Science — CGPA: 9.06 / 10

2020 – 2023

CERTIFICATIONS

- TCS iON National Proficiency Test (NPT) – Graduate Engineer Trainee, IT | Completed May 2026
- TCS iON Job Achiever – Graduate Engineer Trainee, IT | Issued Jul 2026

ADDITIONAL INFORMATION

Self-Directed Learning: Taught myself the full stack behind three independent projects (network security, browser security tooling, full-stack web) outside coursework, alongside a parallel 90-hour professional-skills training track

Languages Spoken: English, Kannada, Hindi
