

ROHAN M K

IT Support & Technical Support Specialist | Graduate Engineer Trainee (IT)

Mysore, Karnataka | 9482715920 | rohanmk33@gmail.com | linkedin.com/in/rohan-m-k | github.com/Rohanmk3

PROFILE SUMMARY

TCS iON-certified **Graduate Engineer Trainee (IT)** graduating 2026, with hands-on troubleshooting and systems experience from three independently built projects spanning network monitoring, security diagnostics, and full-stack systems support. Comfortable working across **Windows and Linux**, diagnosing network and application issues, and documenting fixes clearly. Completed a dedicated professional-communication and workplace-readiness track alongside technical training, and speaks **English, Kannada, and Hindi**. Looking to bring a calm, structured, end-to-end problem-solving approach to an entry-level **IT Support, Technical Support, or Graduate Engineer Trainee** role.

KEY STRENGTHS

- **Troubleshooting & Root-Cause Analysis** — traced and resolved integration issues between an API layer and a database through structured, iterative testing.
- **Network & Systems Diagnostics** — live packet capture and analysis (Scapy), TCP/IP fundamentals, Linux firewall rules (iptables), domain/IP reputation lookups (WHOIS, VirusTotal).
- **Clear Documentation & Communication** — trained in professional workplace communication; documented and self-taught three full projects end-to-end for public GitHub review.

TECHNICAL SKILLS

Operating Systems: Windows, Linux (Ubuntu) — installation, configuration, command-line troubleshooting

Networking & Security: TCP/IP fundamentals, packet analysis (Scapy), firewall/iptables rules, network monitoring, threat-intel APIs (WHOIS, VirusTotal), ML-based anomaly detection

Programming & Scripting: Python, Java, C, JavaScript — for automation and diagnostic scripting

Databases: MySQL, SQLite, MongoDB — basic administration and query-level troubleshooting

Tools & Platforms: Git, GitHub, VS Code, PyCharm, Streamlit

Core CS Foundations: OOP, SDLC, Data Structures & Algorithms, Operating Systems, DevOps basics

RELEVANT PROJECTS

CyberShield — AI-Based Network Monitoring & Incident Response System *Python, Scapy, Flask, MongoDB, React, Streamlit*

- Built a live network-monitoring pipeline that captures traffic in real time, flags anomalies with an ML model, and automatically applies Linux iptables mitigation rules — reducing manual intervention in threat response.
- Built a React/Streamlit monitoring dashboard giving a single, real-time view of network health and flagged incidents, similar to a NOC/support-desk monitoring view — with packet-capture, detection, and service layers kept as independent, easy-to-maintain modules.

HUNT (Secure-Surf) — Website Trust Diagnostic Tool & Chrome Extension *JavaScript, WHOIS API, VirusTotal API*

- Built a diagnostic scoring tool (0–100 “Digital Fence Score”) combining WHOIS and VirusTotal threat-intelligence lookups, then extended the same checks into a Chrome extension for in-context, end-user risk warnings.

Online Event Booking and Management System *HTML, CSS, JavaScript, Bootstrap, Node.js, Express.js, SQLite*

- Designed and shipped a full-stack booking platform end-to-end (browsing, booking, admin management), replacing manual/spreadsheet-based coordination.
- Identified and resolved integration issues between the API and database layer through structured manual testing — the kind of methodical diagnosis used in support ticket triage — as capstone of a 90-hour TCS iON-certified training track.
- Repo: github.com/Rohanmk3/ONLINE-EVENT-BOOKING-AND-MANAGEMENT-SYSTEM

PUBLICATIONS

CyberShield: AI Based Smart Network Security System *JETIR · Vol. 13, Issue 5 · May 2026*

- Co-authored a peer-reviewed paper on the CyberShield project (see Projects) with faculty and student researchers, Dept. of CSE, P.E.S. College of Engineering, Mandya. Published in the *Journal of Emerging Technologies and Innovative Research (JETIR)* — UGC-approved, ISSN 2349-5162, Impact Factor 7.95.
- Paper ID: JETIR2605348 | jetir.org/view?paper=JETIR2605348

INTERNSHIP / TRAINING

TCS iON GET-IT Internship — Job Achiever, Graduate Engineer Trainee (GET-IT) Learning Track *2026*

P.E.S College of Engineering, Mandya

- Completed a 90-hour, TCS iON-certified industry-readiness track combining full-stack technical training with workplace and professional-communication skills — direct preparation for a Graduate Engineer Trainee role.
- Applied a structured, end-to-end software-development-lifecycle process (requirements → delivery) while building the capstone project (see Projects).

EDUCATION

P.E.S Collage Of Engineering, Mandya. B.E in Computer Science Engineering — CGPA: 7.38 / 10 *2023 – 2026*

C.P.C Polytechnic, Mysuru. Diploma in Computer Science — CGPA: 9.06 / 10 *2020 – 2023*

CERTIFICATIONS

- TCS iON National Proficiency Test (NPT) — Graduate Engineer Trainee, IT | Completed May 2026
- TCS iON Job Achiever — Graduate Engineer Trainee, IT | Issued Jul 2026
